New and Improved Open Software Options for Dentists

In-house or Send-to-Partner workflow? It's your choice with 3Shape.

Copenhagen, March 12, 2019 – 3Shape introduces at IDS the 2019 updated versions of its four 3Shape Studio apps. 3Shape Studio apps provide open and intuitive, as well as optional same-day, digital workflows for the most in-demand dental treatments: Clear aligners, implants, splints and same-day dentistry.

3Shape solutions are open. That means that professionals using 3Shape Studio apps are free to choose their workflow, production and partner options. It also means that 3Shape Studio apps interface with virtually all materials as well as providing trusted connections to leading third-party mills and compatibility with a wide range of 3D printers.

Four 3Shape Studio Apps:

Get the clear advantage with 3Shape Clear Aligner Studio

3Shape Clear Aligner Studio is the innovative all-in-one software solution for clear aligner analysis, setup and staging and production preparation—giving practices complete control over their digital future with in-house clear aligners.

The new 3Shape Clear Aligner Studio software launched at IDS brings 20-40% efficiency gains to the setup and staging of clear aligners, with new automated features, such as ID tagging, attachment sizing and placement.

Now with AI Crown and screw-retained crown workflow - TRIOS Design Studio

3Shape TRIOS Design Studio is an easy to use, in-house same-day restorative software. The new version of TRIOS Design Studio introduces AI Crown technology that makes use of deep learning. Coupled with Design Studio's new adaptive edge protection technology, AI Crown quickly proposes a restorative design for the user. This shortens the time to the production step and can make workflows more efficient. All designs are easily editable.

The new TRIOS Design Studio now also includes a screw-retained crown workflow* which enables dentists to add implant restorations, using same-day workflows, to their practice.

TRIOS Design Studio is compatible with a wide range of 3Shape trusted connection mills.

Same-day implant dentistry with 3Shape Implant Studio

The upcoming 3Shape Implant Studio 2019.1 presenting at IDS enables professionals to not only design a restoration based on the implant planning, but produce it with an in-house printer, mill or seamlessly send to a partner lab for production. This enables practices to offer same-day implant dentistry to their patients.

The unique workflow means professionals can scan the patient in the morning, plan the treatment, and design and produce components all in one smooth workflow. The patient can then come back in the afternoon for implant surgery and delivery of a provisional crown.

Labs can also use Implant Studio to supplement their 3Shape Dental System software and provide surgical guide design and production services, as well as optionally offer implant planning. Providing such implant services helps labs to secure orders, including the complete implant restoration which can easily be produced using the planning information and Dental System's design workflows.

Implant planning done with Implant Studio can be used to create customized abutments (healing and final), temporary screw-retained crowns and bridges and the final prosthetics in Dental System.

Fast and intuitive 3Shape Splint Studio

3Shape's completely new Splint Studio* enables the easy production of splints, night guards, protectors and similar dental appliances with just a few clicks. This gives practices and labs an attractive opportunity to add in-demand and highly profitable treatments to their services.

3Shape's new Splint Studio calculates splint designs in seconds while also automatically preparing and optimizing designs for selected manufacturing methods. All designs can be easily edited with intuitive design tools to ensure efficiency and high productivity.

3Shape solutions can be hands-on demoed at the 3Shape IDS booth, Hall 4.2, Booth N-090.

*Splint Studio and abutment design for screw-retained crowns not cleared by the FDA for clinical use in the US. Please Contact your reseller regarding availability of 3Shape products in your region.

About 3Shape

3Shape is changing dentistry together with dental professionals across the world by developing innovations that provide superior dental care for patients. Our portfolio of 3D scanners and CAD/CAM software solutions includes the multiple award-winning 3Shape TRIOS intraoral scanner, the upcoming 3Shape X1 CBCT scanner, as well as market-leading scanning and design software solutions for both dental practices and labs.

Two graduate students founded 3Shape in Denmark's capital in the year 2000. Today, 3Shape has over 1,500 employees serving customers in over 100 countries from an ever-growing number of 3Shape offices around the world. 3Shape's products and innovations continue to challenge traditional methods, enabling dental professionals to treat more patients more effectively. www.3shape.com
